*177 592 621 not mature enough to have children. Two other clearings are inhabited by households of this type that have moved in from the more remote settlements. In both cases, the families of a man and his son-in-law have moved as a unit to the Air Strip.

The third category is still more complex. In these cases, larger numbers of people are present which contributes to the ambiguity of [166] household divisions. Four of these larger groups of relatives in a common clearing are clearly the result of the abandonment of the mine and the occurrence of new resources at the Air Strip. Kinsmen are temporarily allied for the move to the Air Strip from the mine as [596] well as from the more remote areas. These kinship groups are laterally extended. In two cases they are composed of the nuclear families of brothers as well as their sons and sons-in-law. In two other cases, the sons and sons-in-law of a single man and all their [484] wives and children are residing together. Among these groups, component units of a man and his wife and children often left on extended trips either to a more remote settlement or to Matthew's Ridge. Usually, this was because agricultural fields around the air strip were not yet productive.

*177 592 • 624 621 The two remaining examples in the third category are the clearings of the current Captain and the prominent Councillor. The Councillor is about fifty and has three wives of different ages. His household includes an adult son-in-law and son and his wives and [609] children. In addition, an old porknocker long resident among the Upper Barama River Caribs lives in the Councillor's clearing. ooo Holding office has served to extend the household of the current

*177 159 323 she is a dependent widow and lives with her two daughters and son-in-law in his father's clearing. Her pots are particularly noted for being lopsided, making them easy to identify. She was the first to attempt to locate a suitable clay source at the Air Strip. She makes only tuluvas and has sold four at the Air Strip. Three were sold for the use of the mother of the man in whose clearing she resides and one for his sister.

*177 593 431 The only cases in which pots were presented as gifts between clearings involve exchanges between mother and adult daughter. These are actual mother and daughter pairs. Classificatory relatives are not included. These gifts were made in four cases during the period of observation and are an aspect of the sustained generalized reciprocity between mother and adult child in different clearings. Exchanges between mother and adult son usually involve food. However, these exchanges are not formalized in any way and they do not always occur between specific mother and child pairs.

*177 592 [621] In sum, the pattern of cooperation among adult individuals residing in the same settlement has been eroded by the introduction of wage work, other markets, and a money economy. The household composed of an adult man and his wife or wives and children remains the primary cooperative economic unit. However, the household has been extended in various instances to include the adult son or son-in-law and their families. The sustained flow of mutual assistance among a wider circle of kinsmen no longer exists as a common pattern.

[406]

*177 476 624 There is one exception to this pattern which has relevance only in its situational context. As the miners re-established bush farms,

and as others moved to the Air Strip, the prominent Councillor was a pronounced source of agricultural assistance. At one time or another, he helped all households that moved to the Air Strip. To those who requested it, he would give a wolisha (a large basket for carrying loads on the back) of manioc tubers or processed cassava cakes. Clearly, the Councillor was not providing a major portion of subsistence for anyone outside his household. Yet, he was a source of temporary relief during a time when farms were not yet productive and other sources of subsistence foods were scarce. Also, the Councillor made available manioc stalks necessary for planting new fields. Partly as a consequence of these activities, the prominent Councillor was elected as Captain during the second local election held at the Air Strip in October 1971.

As he is a long time resident of the Air Strip and had expanded his already established agricultural fields, the Councillor was able to make allegiances among the population in this manner. During the spring of 1971, he had 16.2 acres under cultivation compared to the incumbent Captain's farms, which amounted to 11.3 acres. This contrasts to 5.8 acres which was the average size of the cultivated fields of the remaining eighteen clearings at the Air Strip. However, this does not represent any sustained differential relationship to local resources. Agricultural fields are not exchanged. Rather, land holding is determined by the labor invested to develop it and remains a resource until it is reclaimed by the forest.[6]

Over time, the size and stability of Carib settlements have changed. Increasingly, the population has centralized around sources of external resources.
